

Simmons SD2000 Firmware Release Notes

Instructions:

There are two firmware updates available for the SD2000. If you have previously updated the firmware on your module, you can use the smaller/faster update called "SD2000-h-20171129.rom" If you have never updated the firmware, you need to use the larger "SD2000-20171129.rom" file.

Note: Since the sound ROM is being updated, this firmware update may take up to 40 minutes.

Changes in Firmware Version 20171129:

- Additional MIDI control features to support Simmons Advanced App. (This version is required to use the app.)
- Memory protect bug fixes.

Changes in Firmware Version 20170919:

- Users can adjust and save settings in the 50 Preset when the Preset Memory Protect is off. Open the Utility menu and set "Preset Memory Protect" to off.
- When saving kits all the drum sound changes will be saved with the kit without having to save the sound changes individually.
- The acoustic kick drum sounds have been improved for better response
