

Simmons Drum Firmware Programmer Instructions.

This program is intended to update the functions and sound set of the Simmons SDxxx Electronic drum kit. Use the latest firmware file from the Simmons website and the programmer for your computer platform (macOS or Windows.)

Follow the steps below for updating your module:

1. Connect the SDxxx to your computer with a USB cable.
2. Turn on the module
3. Start the program
4. You will see a message that tells you the Drum is connecting, then it will say "Drum Connected".
5. Chose your correct module and Use the Browse button to select the ".rom" firmware file that you downloaded.
6. After you select the firmware file press the Program button in the application
7. After a few seconds the program will start uploading the firmware file into the module.
8. Once the update is successful, you will see the message "It is completed. Please Restart Device." The firmware has been loaded and you can restart the module. To do this you must unplug the module and plug it back in. (If the update is not successful, retry)
9. Hold down the - and + buttons then turn on the power. This will reset the module to factory settings so the module will function correctly with the new firmware.
